Applicant(s)

YOSHIO ET AL.

Examiner

Sajous Wesner

Art Unit

2676

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 June 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This communication is responsive to the amendment and response dated June 27, 2005. Claims 1-10 are presented for examination. Claims 11-18 are canceled.

Response to Arguments

1. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5, 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Russon (20040001107) in view of Hagiuda (US 5953008).

Considering claim 1, Russon discloses determining (24, fig. 1) an image processing parameter by moving a thumbnail image (50, fig. 2) displayed on a map (e.g., *interface display 52*) representing a color space to an arbitrary position on the map; and displaying the thumbnail image which has been subjected to image processing (e.g., *dragged and dropped*), at the position after the movement (e.g., *relocating the thumbnail image to a most-recently accessed image location, and then displays the thumbnail image on the display interface at that location. See paragraphs*

Art Unit: 2676

16 and 24). As per the map (or display interface) representing a color space clause as recited in the claim, the Examiner takes notice that such a color space representation would have been an obvious design choice since the concept of representing a map or a display surface as a color space is notoriously well known in the art of image processing. Also, because the applicant has not disclosed that utilizing a map that is represented in color space itself solves any stated problem, it appears the image processing would perform equally well using a display surface or a map representing a color space itself.

Russon fails to specifically teach performing an image processing,
[corresponding to an arbitrary position to which the thumbnail image has been moved],
on the thumbnail image based on its new position on the map (or display).

Hagiuda teaches performing an image processing on the thumbnail image based on its new position on the display (e.g., executing preset concatenation editing on the thumbnail image depending on how a thumbnail image overlaps another thumbnail image. See figs. 5-7 and col. 2, lines 41-54, and col. 3, lines 45-59.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teaching of Russon to include performing an image processing on the thumbnail image based on its new position on the display, in the same conventional manner as taught by Hagiuda; in order to allow the operator to intuitively concatenate and edit the thumbnail images on the screen. See Hagiuda's col. 5, lines 9-18.

As per claim 2, Russon discloses the movement of the image is performed by a drag of the image, an indication on the map, or an indication of a symbol being adjacent to the map. See paragraph 24.

As per claims 3 and 5, Hagiuda discloses the image processing parameter is finely adjusted by indicating a symbol that includes a button or a thumbnail image (e.g., thumbnail image button C, as depicted by fig. 10 and/or fig. 11).

Regarding claim 7, although Russon does not specifically disclose that the map (e.g., *interface display 52*) is moved to move the image; it is noted, however, that it would have been an obvious matter of design choice to modify Russon to move the image by moving the display interface, since applicant has not disclosed that moving the map instead of moving the image itself solves any stated problem and it appears the image processing (24 of Russon) would perform equally well to move the image by dragging the image itself. See Russon's paragraph 24.

Regarding claims 8- 10, these claims contain features that are analogous to and include the equivalent features as recited in claim 1. This being the case, the limitations of claim 8-10 are rejected under the same rationale set forth above for claim 1.

4. Claims 4 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Russon (20040001107) in view of Hagiuda (US 5953008).

Re claim 4, Russon and Hagiuda fail to teach adjusting at least either brightness or contrast of the image, wherein the image processing parameter includes adjusted results of the brightness and the contrast of the image.

Miyashita discloses adjusting at least either brightness or contrast of the image, wherein the image processing parameter includes adjusted results of the brightness and

Art Unit: 2676

the contrast of the image (see line 50 of column 3 to line 38 of column 4 and lines 14-63 of column 9 and Fig. 8-10 and 25-27; it is noted that when user moves the reference circle, the contrast and intensity of the image are modified accordingly).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teaching of Russon and Hagiuda to include adjusting at least either brightness or contrast of the image, wherein the image processing parameter includes adjusted results of the brightness and the contrast of the image, in the same conventional manner as taught by Hagiuda; in order to allow the user to conjecture changes in the color image visually and make color corrections easily and quickly. See Miyashita's col. 2, lines 1-5.

Regarding claim 6, Russon and Hagiuda fails to teach a map that represents a range in which color adjustment can be performed, and the position of the image represents a state of the color adjustment.

Miyashita discloses a map (e.g., a Lab color space) that represents a range in which color adjustment can be performed, and the position of the image represents a state of the color adjustment (see line 54 of column 3 to line 38 of column 4, lines 1-30 of column 6, lines 19-27 of column 14 and lines 24-32 of column 15 and fig. 8- 10).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teaching of Russon and Hagiuda to include a map that represents a range in which color adjustment can be performed, and the position of the image represents a state of the color adjustment, in the same conventional manner as taught by Hagiuda; in order to allow the user to conjecture

Art Unit: 2676

changes in the color image visually and make color corrections easily and quickly. See Miyashita's col. 2, lines 1-5.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

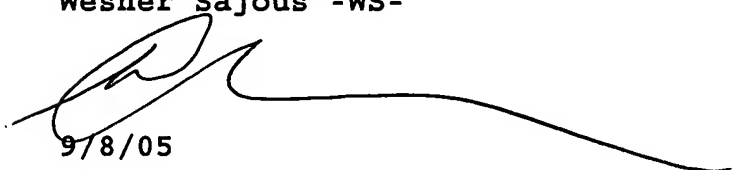

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sajous Wesner whose telephone number is 571-272-7791. The examiner can normally be reached on Mondays thru Fridays between 11:00 AM and 7:00 PM.

Art Unit: 2676

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Bella can be reached on 571-272-7778. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
